RE: City of Angels Amended WDR Comments

Dear Mr. Marshall:

Herewith, the City of Angels (City) is providing its review comments on the Tentative Order Amending Waste Discharge Requirements Order No. R5-2007-0031 proposed to regulate the treatment and disposal of wastewater from the City of Angels Wastewater Treatment Plan. The City believes the Order is well crafted and appropriate. The City appreciates the efforts of Regional Water Board staff in working closely with the City throughout the process. We request that the following minor matters be considered by Regional Water Board management prior to the Tentative Order being submitted to the Regional Water Board for approval.

T.O. Page	Item	Description
1	4	The Mixing Zone Study date of 28 May 2008. The City submitted an amended Mixing Zone Study 30 January 2009. The City requests that the date be changed to reflect the date of the amended Report.
2	6	It is stated that "A dilution credit of 19 has been allowed for compliance with human health criteria and acute and chronic aquatic toxicity criteria". This is not an accurate statement, as a dilution credit of only 9 is allowed for ammonia.

Sincerely,

City of Angels

Gary Ghio
City Engineer
